INFORMATION TECHNOLOGY & SOLUTIONS

Cours Sécurité Réseau

Roland Inan
Didier Law-Tho

## Plan du cours

- Rappels des concepts réseau
- Bases de la cryptographie
- Composants de sécurité réseau
  - Zones démilitarisées (DMZ)
  - Serveurs mandataires (Proxies)
  - Pare-feux (Firewalls)
  - VPN (Virtual Private Network)
- Etude de cas:
  - Projet de mise en place de services de diffusion vidéo live
- Perspectives
  - Introduction à la Cybersécurité

## Etude de cas: Services de diffusion video Live

- Pour pouvoir diffuser de la vidéo en direct sur son réseau d'entreprise, Sanofi avait déployé entre 2004 et 2009 une infrastructure de distribution de contenu (CDN – Content Delivery Network) à base d'équipements Cisco.
- Avec la montée en puissance de la vidéo en direct et les demandes croissantes des métiers, notamment de la communication interne, pour supporter des évènements live, cette infrastructure matérielle ne répondait plus aux besoins de l'entreprise.
- Après une série d'études des solutions du marché et de maquettes (Proofs-Of-Concept) réalisées entre 2016 et 2017, les équipes ITS (Information Technology & Services) de Sanofi ont finalement choisi de remplacer le CDN de Cisco par la solution CDN logicielle (SD CDN - Software Defined Content Delivery Network) de la société Kollective en 2018.

# Le groupe Sanofi

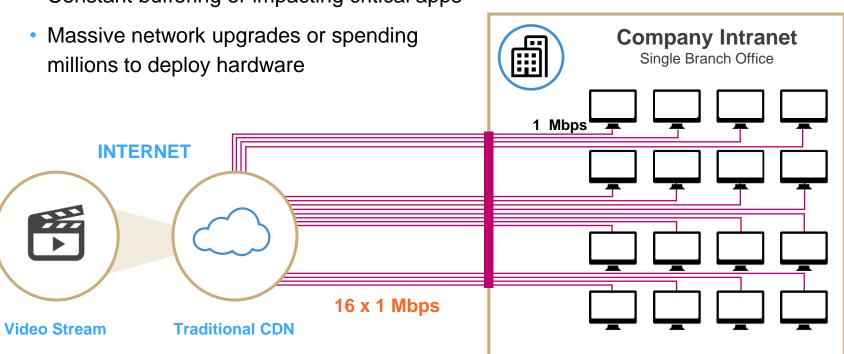

Constant buffering or impacting critical apps

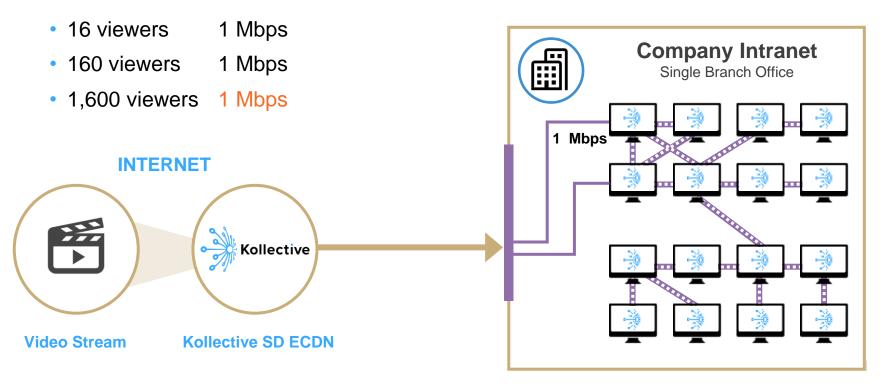

INFORMATION

## Software Defined Enterprise Content Delivery Network

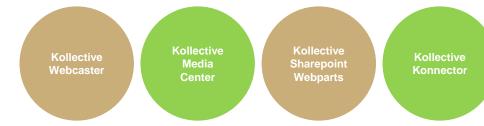

With a unique software-defined approach, the Kollective SD ECDN enables enterprises to scale video without increasing bandwidth requirements ...

# Aperçu de la plateforme Kollective

**Applications** 

3<sup>rd</sup> Party Integrations (WEST UC)

**Core Shared Services** 

Transcoding

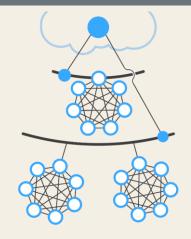

**Analytics** 

Kollective for SCCM

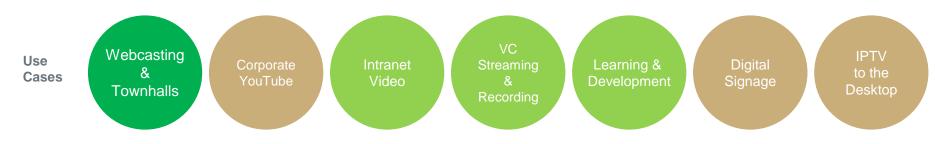

Delivery Foundation: Software Defined ECDN

- 100% reach
- · Network protection
- Rapid deployment
- SaaS, no Capex
- In-built Testing and Network Assessment
- Low operational overhead
- Great user experience QoE

## Cas d'utilisations de la distribution vidéo

**Core Shared Services** 

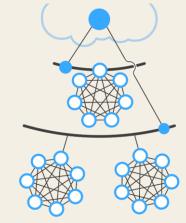

Analytics

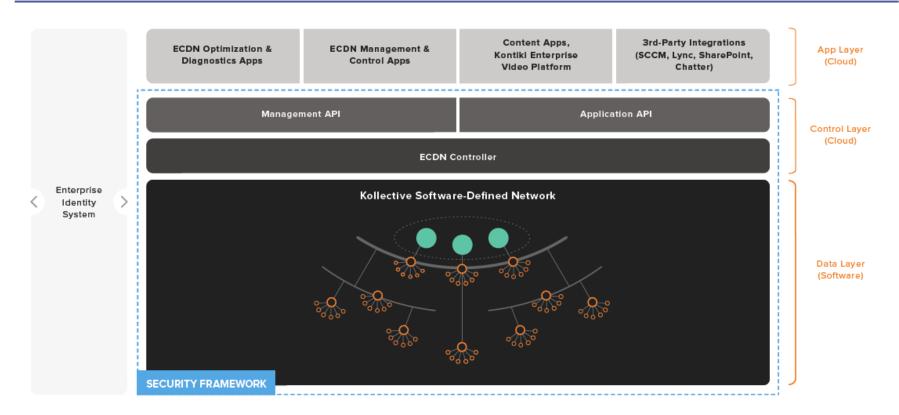

**Delivery Foundation: Software Defined ECDN** 

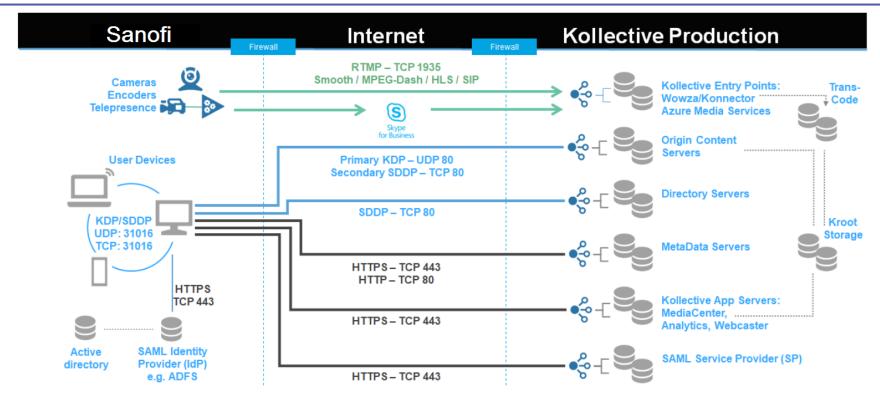

# Les composants clés de Kollective

## Architecture réseau

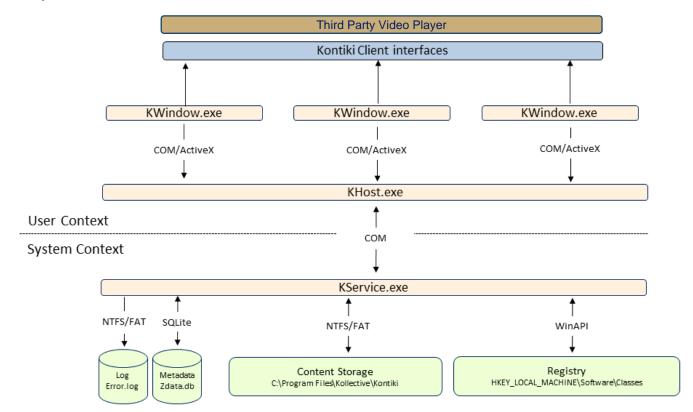

# L'agent Kollective

INFORMATION **TECHNOLOGY** & SOLUTIONS

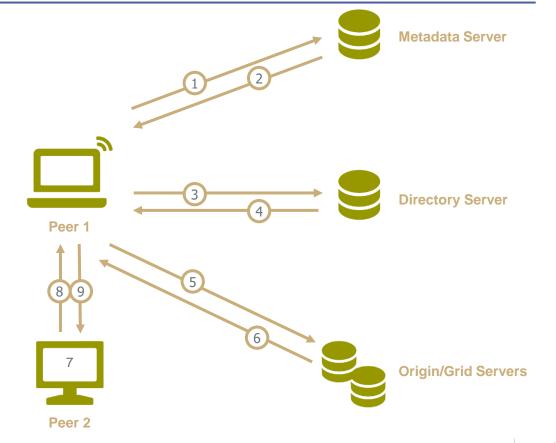

- High performance with low resource overhead
- Does not require Java or other virtual machine

# Le mécanisme de peering

INFORMATION TECHNOLOGY & SOLUTIONS

- 1. Get delivery metadata request
- Content metadata
- 3. Resolve servers for content request
- 4. Prioritized server and peer list
- 5. Content delivery range request
- 6. Content delivery data
- 7. Peer 2 proceeds through steps 1–4
- 8. Content delivery range request
- 9. Content delivery data

# Network Readiness Test (NRT)

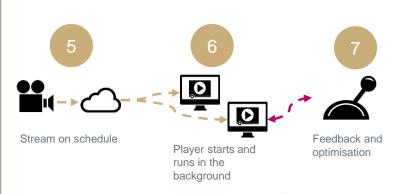

### Maximum configurability

- 1. Define who: Target IP address ranges, domains or localities. Specify the minimum participation ratio. Specify which IP ranges to exclude.
- 2. Define stream: Test different bitrates to determine optimal video codecs for your users
- 3. Define when: start time, staggered start times and durations

### Real scenario testing

- Edge-to-edge: True test running from source to video player
- 2. Viewing experience: Player inbuilt in the agent will silently play the video stream in the background without any user interaction.
- 3. Control: Optimisation and tuning based on real results.

# Sécurité et protection des données

#### **Kollective Cloud**

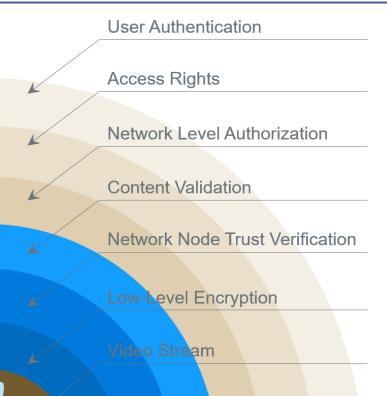

- SOC2/SOC1/ISO 27001 certified
- Tier 4 data center (most secure)
- 24x7 system monitoring/intrusion detection
- Public Internet or Private VPN Connection

#### **Transmission**

- Propriety encrypted protoco
- 2048 bit encryption public/private signatures
- Content encrypted in transit and "at rest

#### **Identity & Content Protection**

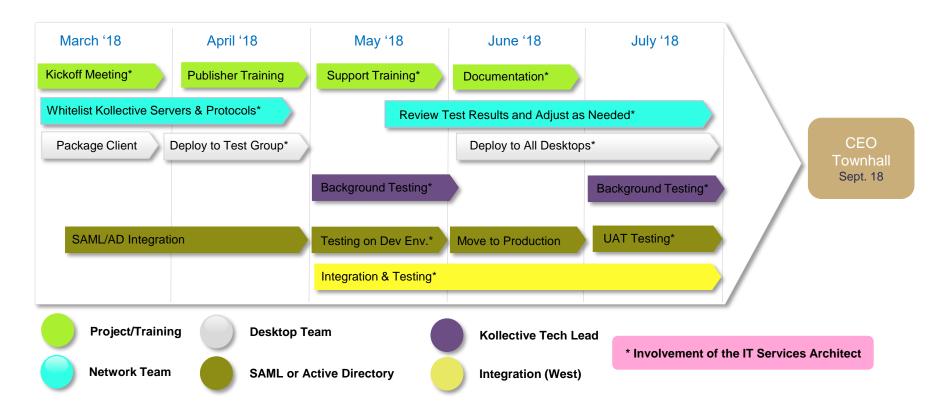

Industry standard federated identity via SAML 2.0

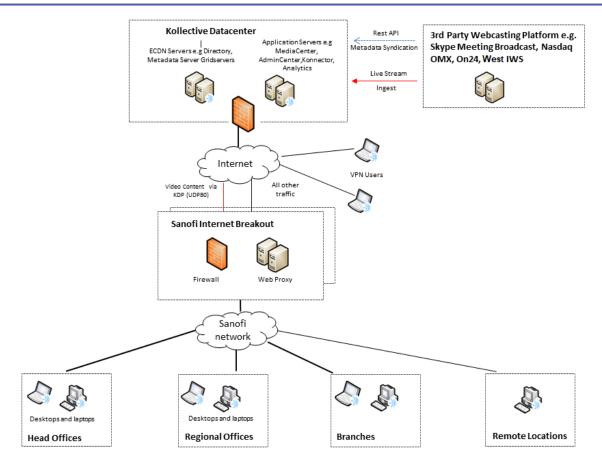

# Déploiement de la solution Kollective

## **Architecture Kollective**

# Les prérequis réseau

 \*.kontiki.com or specific servers need to be whitelisted in proxy if using proxy authentication.

 KDP (UDP port 80) needs to be opened in firewall to allow all workstations to connect to Kontiki grid servers.

Desktop firewall needs to allow inter-desktop communication on UDP port 31016.

client.kontiki.com internally resolvable to 127.0.0.1

# Télédistribution de l'agent

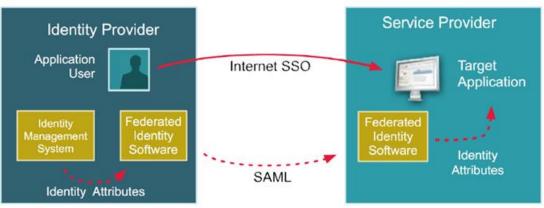

- Windows (7&10) and Mac OS X (Sierra, High Sierra)
- MSI (about 8MB)
- PKG (about 16MB)
- Must have Admin Privileges to install
- Push via MSFT SCCM
- Push Silently, Recommend Reboot, Stop/Start Kservice (Windows)
  - Msiexec.exe /I "PATH\_TO\_MSI\KollectiveAgent-10.0.0-Setup.msi" /qn /norestart KCONFIGDIR="PATH\_TO\_MSI"
- Workstation reboot is required if using web proxies

## SAML et SSO

- At Sanofi, SAML 2.0 is the main standard used for identity federation
  - SAML 2.0 (Security Assertion Markup Language) is the predominant protocol for browser-based identity federation. It is an XML
    based open standard to transport identity information between entities on Internet and a standard way to authenticate users to a
    web application without sending password to it.
  - WS-Federation is Web Service oriented and addresses the identity requirements of both web applications and web services in a variety of trust relationships based on the Security Token Service Model.

# Intégration avec le partenaire West

#### Webcast Pro

with integration to Sanofi's Kollective SD ECDN deployment

### Host any kind of webcast with any combination of

- combination
- AudioSlides
- Video
- video

#### Feature-rich interface:

Benefit from expansive feature set, including

- Dynamic branding (pre, live and post webcast)
- Q&A
- Closed caption
- Video clips
- Video feeds (Webcam, VCU, AV)
- Access Controls Sanofi SSO Integration

#### Bespoke Integration

- BlueJeans
- Wisembly
- 'Our Leaders'

#### Reporting and Analytics

#### Platform Integration

- Delivery Kollective SD ECDN
  - Deployed to 100,000 desktops
- · Portals Kaltura

| CRM/LMS  | Social Media | Delivery     | Portals              |
|--|--------------|--------------|----------------------|
| eloqua   | f Linked in  | Kollective   | west                 |
| and the same of th |              | <b></b> ramp | Virtual Environments |
| Marketo Marketo  | <b>6</b>     | octoshape    | KALTURA              |
| sumtotal   | 6            | BlueJeans    | <b>GEONNEX</b>       |

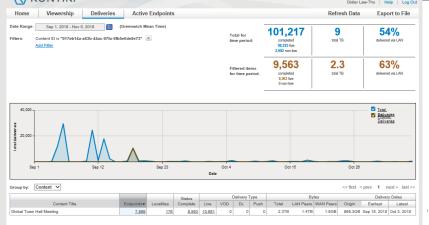

# Global Townhall du CEO (18 sept. 2018)

## Conclusion

- Le déploiement de Solution Kollective s'est déroulé sans problème majeur. La partie la plus délicate a concerné l'intégration avec la plateforme de webcast du partenaire West/Intrado.
- Après la belle démonstration du global Townhall du CEO au mois de septembre 2018, la direction ITS a décidé de s'engager auprès de Kollective pour les 2 ans à venir. Les équipes ITS travaillent déjà à l'extension du service Kollective aux autres outils « Digital WorkPlace »: Zoom webinars, Microsoft Stream, Teams, Yammer, etc.
- Ce type de projet de déploiement constitue un très bel exemple de mise en pratique de toutes les compétences d'un expert infrastructures IT (réseaux, cybersécurité, outils du métier d'architecte, conduite de projet, etc.).
- La Cybersécurité, l'Intelligence Artificielle, l'Internet des Objets sont avec le Big Data les domaines du futur où les défis techniques à relever seront les plus importants et les opportunités d'évolution de carrières les plus intéressantes.

# Questions/Réponses

MASTER SYSTÈMES D'INFORMATION, RÉSEAUX ET NUMÉRIQUE
